UNDERSTANDING
ORGANIC
RUGS

WHY SHOULD WE PLACE ORGANIC RUGS IN OUR HOME?

DID YOU KNOW?

Jute rugs are the softest and most comfortable, a barefoot walk on them can reduce our mental stress; otherwise, it may contribute to releasing pains in our foot like giving us therapy.

Organic rugs don't release chemicals into the air compared to synthetic rugs. There are no toxic gases or dust in them.

The warmth given by them is totally natural.

Thus, feeling that warmth will make everyone feel better with a soft touch.

MAIN TYPES OF ORGANIC RUGS

Jute.

The secret of jute is that it's breathable and strong. On top of that, it's soft, which makes it comfortable. Jute can be suitable for medium-traffic zones.

Due to its specific characteristics, you can even place this rug outdoors.

Hemp.

Hemp grass is the primary source of this material. This plant is an eco-friendly and hypoallergenic solution. If household members have asthma or allergies, these rugs are a smart choice.
